			1797	
			NOTIFICATION DATE	DELIVERY MODE
			12/04/2009 ELECTRONIC	

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

andrea.dececchis@ciba.com
deborah.pinori@ciba.com
sonny.nkansa@basf.com

Office Action Summary

Application No.

10/591,776

Applicant(s)

WHITTAKER ET AL.

Examiner

/Peter A. Hruskoci/

Art Unit

1797

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 November 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,3,4,6,7,9 and 11-17 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,3,4,6,7,9 and 11-17 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SF/08)
Paper No(s)/Mail Date 8/24/09
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3, 6, 7, 9, 11, 14, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sander et al. 4,840,736 in view of Sorensen et al. 5,846,433. Sander et al. disclose (see col. 2 line 1 through col. 5 line 49) a process for dewatering sewage sludge substantially as claimed. The claims differ from Sander et al. by reciting that the second flocculant is in the form of dry particles. Sorensen et al. disclose (see col. 7 line 3 through col. 8 line 17) that it is known in the art to utilize a second flocculant comprising dry particles in a process of thickening and dewatering a sewage sludge. It would have been obvious to one skilled in the art to modify the process of Sander et al. by utilizing the recited dry particles in view of the teachings of Sorensen et al., to aid in dewatering the sewage sludge. With regard to claims 9 and 14, it is submitted that Sorensen et al. as applied above, discloses the flocculants and intrinsic viscosity.

Claims 15 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sander et al. 4,840,736 in view of Sorensen et al. 5,846,433 as above, and further in view of Payne et al. 5,698,109. The claims differ from the references as applied above by reciting that the dry particles have a specific diameter. Payne et al. appears to disclose (see col. 5 line 9 through col. 8 line 48) that it is known in the art to utilize dry polymer particles having the recited size, to aid in dewatering a sewage sludge. It would have been obvious to one skilled in the art to modify the references as applied above, by utilizing the recited dry particles in view of the teachings of

Payne et al., to aid in dewatering the sewage sludge. The specific particle diameter utilized, would have been an obvious matter of process optimization to one skilled in the art, depending on the specific sludge treated and results desired, absent a sufficient showing of unexpected results.

Claims 1, 3, 6, 7, 9, 11-14, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sander et al. 4,840,736 in view of Ghafoor et al. 6,001,920. Sander et al. disclose (see col. 2 line 1 through col. 5 line 49) a process for dewatering sewage sludge substantially as claimed. The claims differ from Sander et al. by reciting that the second flocculant is in the form of an aqueous composition having a specific polymer concentration. Ghafoor et al. disclose (see col. 1 line 16 through col. 6 line 36) that it is known in the art to utilize a flocculant composition having a concentration of 5% by weight, to aid in flocculating sludge suspensions. It would have been obvious to one skilled in the art to modify the process of Sander et al. by utilizing the recited concentration in view of the teachings of Ghafoor et al., to aid in flocculating and dewatering the suspension. The specific concentration utilized, would have been an obvious matter of process optimization to one skilled in the art, depending on the specific sludge treated and results desired, absent a sufficient showing of unexpected results. With regard to claims 9 and 12-14, it is submitted that Ghafoor et al. as applied above, appears to teach the use of the recited flocculants and slurry of flocculant and polyethylene glycol, respectively.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined

Art Unit: 1797

application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1, 3, 4, 6, 7, 9, 11, and 14 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-17 of copending Application No. 10/591,777. Although the conflicting claims are not identical, they are not patentably distinct from each other because the process steps recited in the instant claims appear to be fully encompassed by the process steps recited in the claims of the copending application.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claims 12 and 13 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-17 of copending Application No. 10/591,777 in view of Ghafoor et al. 6,001,920. The claims differ from the claims of the copending application et al. by reciting the second flocculant is introduced in the form of a slurry in a liquid, and the liquid in the slurry is polyethylene glycol. Ghafoor et al. appears to disclose (see col. 1 line 16 through col. 6 line 36) that it is known in the art to utilize a flocculant composition including a slurry of flocculant and polyethylene glycol, to aid in flocculating

sludge suspensions. It would have been obvious to one skilled in the art to modify the process of recited in the claims of the copending application by utilizing the recited slurry in view of the teachings of Ghafoor et al., to aid in flocculating and dewatering the suspension.

This is a provisional obviousness-type double patenting rejection.

Claims 1, 3, 6, 7, 9, and 11-14 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-15, 18, and 19 of copending Application No. 10/591,878. Although the conflicting claims are not identical, they are not patentably distinct from each other because the process steps recited in the instant claims appear to be fully encompassed by the process steps recited in the claims of the copending application.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Applicants argue that Sorensen et al. does not disclose the additional step for adding the second flocculant into a thickened suspension formed by the addition of a first flocculant as in the instant process. Applicants are directed to col. 3 lines 15-22 of Sorensen et al. which teaches the use of a thickening process to produce a thickened sludge, and a mechanical dewatering process to produce a cake. It would appear that the addition of the cationic polymer coagulant as in Sorensen et al. would form a thickened suspension as recited in instant claim 1. It is further submitted that Sander et al. as applied above, appears to disclose the above additional step.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to /Peter A. Hruskoci/ whose telephone number is (571) 272-1160. The examiner can normally be reached on Monday through Friday from 8:00AM-5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Duane Smith can be reached on (571) 272-1166. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
